

The Director

Enhanced Sound Quality for Loop Amplifiers

The Director is a powerful lightweight microphone that plugs easily into standard loop amplifiers to enhance the sound level and quality received by wearers of Telecoil-equipped hearing instruments within the loop's range.

The Director increases the available sound level and filters out unwanted background noise up to 30 db. At the simple flick of a switch, the unit's Zoom and Wide settings allow the user to focus on specific or peripheral sounds with greater clarity.

The Zoom setting focuses on sounds in front of the microphone, greatly reducing surrounding sounds. The Wide setting picks up surrounding sounds with enhanced balance and clarity, even in noisy environments.

Convenient use in facilities that cater to the hearing impaired

The Director is ideal for use with standard loop amplifiers in a variety of settings that support the special needs of the hearing impaired, including classrooms, lecture halls, conference facilities, museums, health facilities, government agencies, and work environments, to name only a few.

The microphone can be placed in a raised position on a nearby surface using the convenient fold-out stand,

The Director – At a glance:

- Plugs easily into standard loop amplifiers
- Zoom and Wide settings focus on sounds nearby or up to 25 metres away
- Enhances sound level and removes unwanted background noise
- Held in the hand or placed in a raised position on a nearby surface
- Requires no batteries or recharging
- Includes 4 metre cable with jack plug
- One year guarantee

Ideal for:

- Classrooms & Lecture Halls
- Conference Facilities
- Work Environments
- Health Facilities
- Government Agencies
- And more!

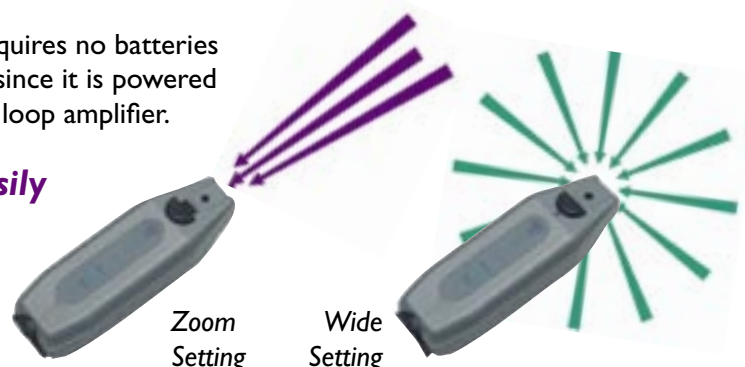

or held in the user's hand and pointed at the sound source.

The unit includes a 4 metre cable, enabling flexibility in positioning it near the loop amplifier.

The Director requires no batteries or recharging, since it is powered directly by the loop amplifier.
